## ACCESS CONTROL

Ticketpro access control technology manages all entries and exits during your event. Available on tickets, passes and wristbands that are equipped with RFID chips and barcodes, you can eliminate fraud, control capacity, manage attendance, and use real-time reporting to eliminate hassle and maximize revenue.

All devices communicate with the Ticketpro database in real time, so you can choose the style that best suits your event, or even combine several different models.

YOUR TICKET TO THE ENTERTAINMENT WORLD!

## A COMPLETE TICKETING SOLUTION

# Barcode Scanners

All Ticketpro barcode scanners are handheld, easy to configure and extremely user-friendly. They can be used to scan tickets, passes and wristbands at exhibits, conventions, seminars, concerts, venues, arenas, conferences and festivals.

The scanners communicate in real time with the Ticketpro database via a wireless network in order to verify the validity of a barcode:

- ✓ **Valid Scan** – valid barcode - authorized to enter
- ✓ **Invalid Scan** - invalid barcode – not authorized to enter
- ✓ **Duplicate Scan** – barcode already scanned into event

**Motorola MC7090**  
Scans 1D barcodes

**Linea Pro 4**  
for iPod & iPhone  
Scans 1D and  
2D (QR) barcodes

**Motorola MC7094**  
Scans 1D and  
2D (QR) barcodes

**Motorola MC55A0**  
Scans 1D and  
2D (QR) barcodes

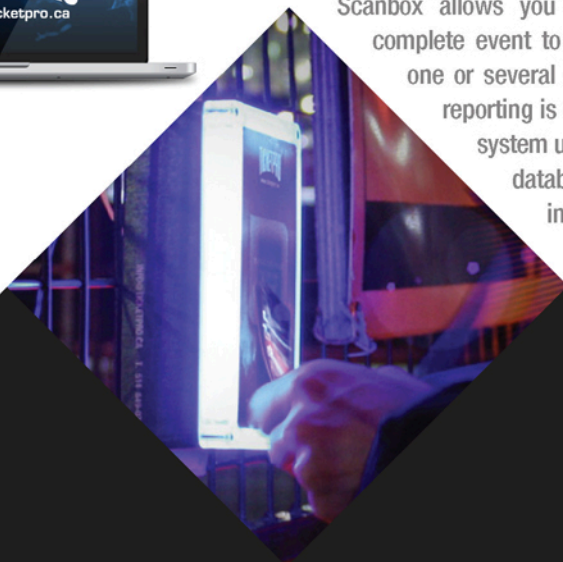

## iScanpro for iPod & iPhone

The Ticketpro app is free to download from the App store and not only scans barcodes with the device's camera but also provides the user with a lot of helpful information, such as capacity reports, customer lists and scanning logs.

## Scanbox

For those who want to scan at their event but don't have a reliable internet connection, Ticketpro offers an innovative solution: Scanbox.

Scanbox allows you to download your complete event to a local network of one or several devices. Real-time reporting is still available as our system updates the Ticketpro database whenever the internet connection permits.

## RFID

20 cm X 12 cm X 5.5 cm

1800 passes per hour  
per device

Ticketpro has applied the latest innovations in the industry in order to offer RFID access control to their clients. The advantages of our new device, Cerberus, include increased security, quicker entry into the site and passes that cannot be duplicated and are more resistant to wear and tear.

Ticketpro is pleased to bring a smaller, more portable solution to our clients, one that is easy to ship, simple to install, and easy to use. The device allows you to program, read and validate entries in real time:

- ✓ A green indicator light identifies valid entries
- ✓ A red indicator light identifies invalid entries
- ✓ A purple indicator light identifies second entries

## Electronic & Mobile Tickets

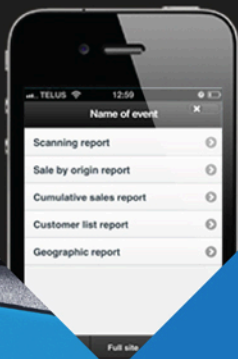

Scanning at your event means you can offer electronic and mobile tickets to your customers without worrying about fraud. These tickets are not only convenient for your customer, they give you more space on the ticket for colourful logos and text.

## Reporting

Detailed real-time reports are available at all times, both online and on your handheld scanning device:

- ✓ Detailed lists of entries and exits
- ✓ Capacity and attendance reports in real-time
- ✓ Tickets scanned by ticket type, price type, pass type, and more
